Dear Recruiter,

I am writing this letter seeking a new experience and a new journey, to build the next generation of software.

I am a Senior year engineering student, Majored in Computer Networks & Telecommunications Engineering, at the National Institute of Applied Sciences & Technology, Tunis - Tunisia, also known as **INSAT Tunisia**. My Curriculum consisted of different flavors of computer engineering classes, from Networking, Signals and Telecommunications, Software Development Life cycle, IT, Data and Management, and packed with a lot of different projects, which gave me a versatile profile. I have been contributing to full stack web projects since I started college, I have also experienced other various domains and from Mobile Development, DevOps, Blockchain, Cyber Security, Data Science... etc. Currently, I'm exploring more the platform engineering and cloud surface and for that I am preparing for the Certified Kubernetes Administration and the AWS Solution Architect Associate Certification. I am a challenge oriented person, My two end of year projects were totally based on challenging ourselves, including building a platform as a service to deploy apps on Kubernetes. and I have also took the responsibility to build a competitive programming platform where it will be used to hold a live contest, Happily watching it work onsite.

Throughout less than 4 years of my time at university, I had the opportunity to work on a lot of events and improve my soft skills. From Public Speaking with presenting at hackathons, Tutoring for Technical Workshops... Leadership skills especially while interning, and working under stress, I played Cybersecurity Games (*Capture the Flag*) in my spare time, Sometimes writing as an author (Web Exploitation author in 3 CTFs), playing Competitive Programming and participating in many editions of IEEEExtreme, Tunisian CPC... For my Second Internship, Hosted by *Talan*, I was one of the key members to deliver the Proof of concept and apart from technical I was involved in the weekly presentations, benchmarking, leading the team, and even held a workshop. Leading the team to be a top performer for that year.

I believe being a part of a leader in the industry and an entity that delivers highly available tech products that reaches millions of users will be a really great place to experience what's it like to contribute and see that contribution in action in the form of users satisfaction. Innovation is a must and I believe you will be a great plateau to innovate. I am really excited to discuss my qualifications further and your vision for your upcoming projects.

Thank you for considering my application. I am looking forward to get in touch with you for any internship positions, so I can get the opportunity to contribute to its ongoing success.

Best Regards,

Mohamed Sofiene Barka
